

EDUCATION

Temple University

B.S. in Computer Science, Data Science Minor, GPA: 3.62

Philadelphia, PA

Aug. 2023 – May 2027

- **Honors:** Honors Program, Dean's List (Fall 2023), Merit-Based Scholarships (\$20k+), Tokyo Japan Study Abroad Scholarship (\$2,500+)
- **Notable Coursework:** C Programming, Object-Oriented Programming, Data Structures & Algorithms, Probability and Statistics, Low-Level Programming, Systems Programming and Operating Systems, Discrete Math, Linear Algebra, Web Application Development, Machine Learning, Software Design, Cloud Computing
- **Extracurriculars:** ACM (President), Temple Data Science Community (Treasurer), OwlHacks (Logistics Director)

SKILLS

Languages: Java, C/C++, Python, HTML/CSS, JavaScript, SQL, Node.js, TypeScript, Go

Frameworks/Tools: AWS (EC2, Lambda), Docker, Git, React, Flask, Spring, TensorFlow, Pandas, MySQL, Scikit Learn, PostgreSQL

Concentrations: Retrieval-Augmented Generation (RAG), Cloud Computing, Large Language Models (LLMs), Databases, Full-Stack Development, Machine Learning, Data Warehousing, Generative AI, Open-Source Projects, REST APIs

WORK EXPERIENCE

SAP

Cloud Solution Engineer Intern

Newtown Square, PA

April 2026 – Present

- Designed and implemented a Kubernetes-containerized automation pipeline that scans OpenStack control plane version data from object storage, detects documentation drift, and generates pull requests daily via CronJob, ensuring continuous PCI DSS audit compliance
- Validated an upstream open-source fencing agent patch by building from a PR branch on RHEL, generating portable .patch files, and executing end-to-end Nova API fencing tests with Keystone Application Credential authentication in a federated identity environment
- Validated Linux cluster fencing protocol that isolates failed nodes via Nova API power actions (stop/start/reboot), preventing split-brain scenarios and data corruption in high-availability OpenStack deployments

SAP

Software Engineer Intern

Newtown Square, PA

May 2025 – Mar. 2026

- Developed cloud-native AI agent built on SAP Datasphere, designing scalable REST APIs and distributed data pipelines to analyze enterprise-scale data warehousing reports and generate automated Gantt visualizations
- Designed RAG-based retrieval system and vector engine architecture integrating SAP HANA embeddings, increasing **ingestion capacity to 100+ pages** while **reducing token cost by 40%**
- Participated in agile sprints and code reviews, automating deployments onto SAP Cloud Foundry using Kubernetes orchestration

Develop For Good

Frontend Engineer Intern

San Francisco, CA

May 2025 – Aug. 2025

- Deployed web application on AWS EC2 for non-profit, configuring cloud infrastructure and implementing CI/CD for automated deployment
- Contributed to sprints and stand-ups in agile 13-person team while debugging frontend issues and documenting for future scalability

Human-Computer Interaction (HCI) Lab

Research Lead

Philadelphia, PA

May 2024 – Sept. 2025

- Led 7-member team researching computing career readiness, focusing on marginalized communities
- Automated analysis of **500+ short-form videos** via Python scripts & JSON parsers (**65% inter-rater reliability**)
- Produced 6 data visualizations (Altair) and co-authored peer-reviewed paper **published at SIGCSE Technical Symposium 2026**

PROJECTS

Laptop Specification Pricing ML Model | <https://github.com/adyan1025/laptop-price-model>

Python, Pandas, Scikit Learn, Jupyter Notebook, Streamlit

Philadelphia, PA

Jan. 2026

- Built machine learning model to predict laptop prices by preprocessing specs data, encoding categorical features, and training Random Forest and Linear Regression models, achieving an R^2 of 0.78 and mean absolute error of \$204 USD
- Deployed interactive Streamlit application allowing users to input laptop specifications and receive real-time price predictions in USD, providing a practical tool for price estimation and feature analysis

Trust Circle |  <https://github.com/adyan1025/Trust-Circle>

Newtown Square, PA

Python, Flask, Javascript, React.js, SQL, HANA Database, Cloud Foundry, SAP AI Core, LangChain, GPT-4o

Aug. 2025

- Prototyped and engineered innovative **fintech platform** enabling groups to save and approve interest-free loans with RAG assistant
- Presented platform to 6 judges and 40 interns, **winning 1st Place** at SAP Hackathon 2025

JIM, Virtual AI Gym Assistant |  <https://github.com/adyan1025/jim>

Philadelphia, PA

Python, Flask, Javascript, React.js, TensorFlow, Pandas, Gemini 1.5 Pro

Apr. 2024

- Developed AI workout assistant and trained machine learning model to provide live camera feedback on exercise form with **80% accuracy**
